

#### **General overview of ransomware attacks**

## **Key figures and news**

**266**\* /

successful ransomware attacks claims in February 2023

Increase of 66,25 % ransomware attacks claims between January and February 2023

Claim of a new attack against Ingenico by Snatch. This attack would really only be a reuse of data stolen in 2019 during a previous attack.

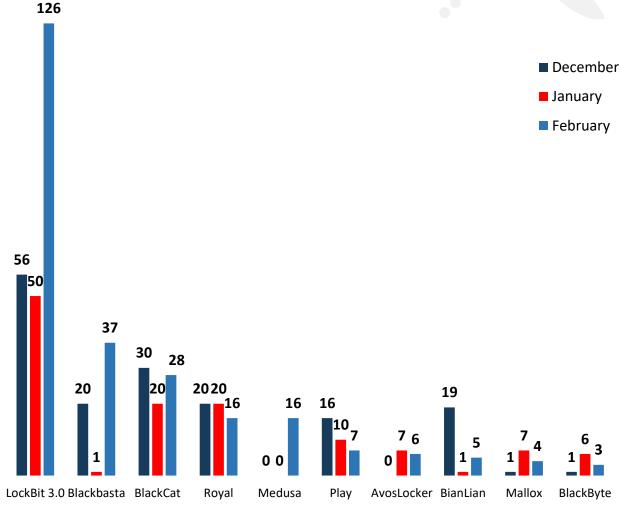

## Vmware campaign

Around February 3, 2023, thousands of servers running older versions of VMware's ESXi hypervisor were attacked in a ransomware campaign.

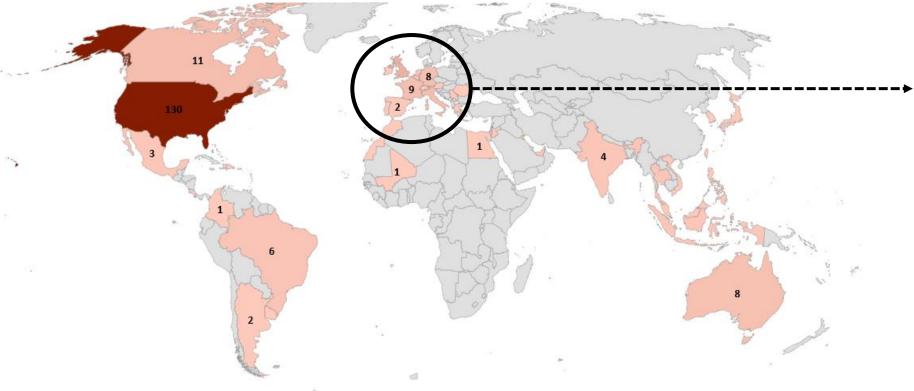

#### Top 10 most active ransomware operators in the last three months

# **Cartography of claimed ransomware attacks**

Attackers using ransomware attacks are most often motivated by profit. The victim is designated as a result of the discovery of a security breach in its perimeter and not by prior targeting.

Countries most targeted in Europe in February 2023

# **Targeting**

In February, the most targeted sectors were:

- Manufacturing
- Construction
- Retail

## Focus on access and database sales

337

Initial access/database sales witnessed online

Every day, dozens of accesses and databases are sold on forums and malicious marketplaces. Obtaining them could lead to attackers gaining initial footholds and compromising more entities.
