

Cybercrime Threat Landscape

April 2023

www.intrinsec.com

Focus on ransomware compromises

Key figures

356 ↓

Decrease of **11.44 %** ransomware attacks claims between March and April 2023

- 1** United States (174)
- 2** Canada / France / United Kingdom (15)
- 3** Germany (14)

- 1** Manufacturing
- 2** Health service
- 3** Retail

1 184 Claims since 1 January 2023.

Top 10 most active ransomware operators in the last three months

Number of claims of ransomware attacks per month

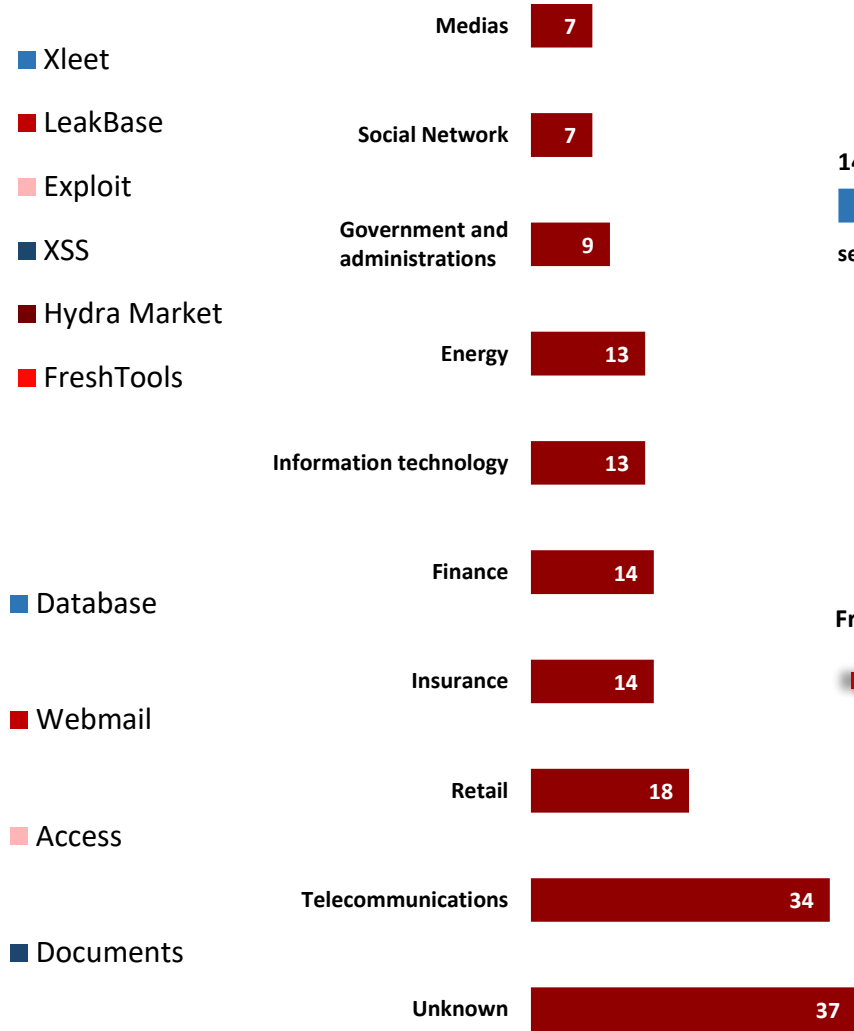

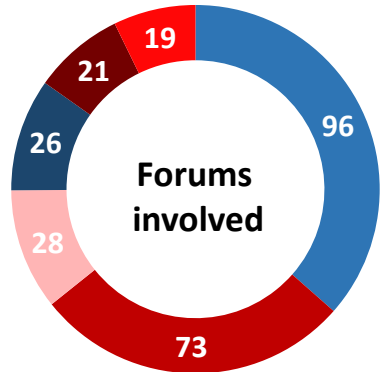

* This data is the result of an internal methodology used by Intrinsec's CTI team, which consists of identifying public claims of attacks directly on the websites of ransomware operators.

Focus on access and database sales

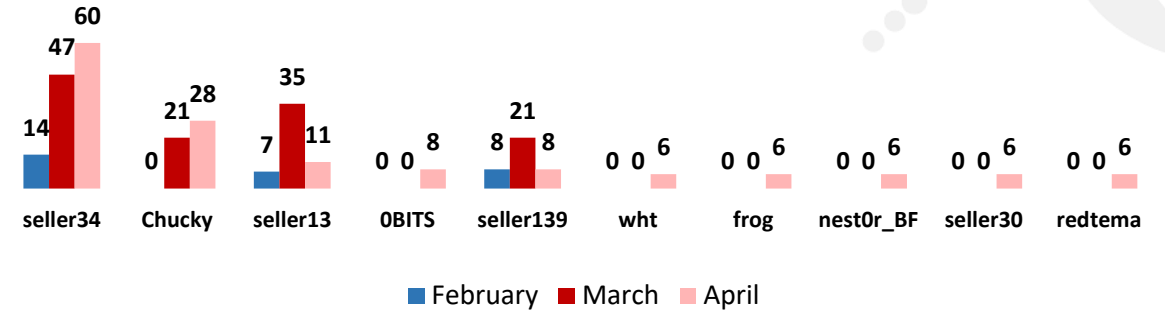

263

Initial access/database sales witnessed online in March 2023

Every day, dozens of accesses and databases are sold on forums and malicious marketplaces. Obtaining them could lead to attackers gaining initial footholds and compromising more entities.

Most active threat actors this month

Targeted countries during sales *

* The research methodology of the CTI team induces a bias on the indicators for France, a country for which the indicators are more exhaustive than for other countries, due to the origin and activities of the CTI service's clients.

Overall trend of threats

TitanStealer

On April 16, 2023, the Killnet group, responsible for many DDOS attacks targeting institutions and governments, announced their collaboration with the Titan Project team that developed the Titan Stealer malware.

OpIsrael

Since April 7, the day before Holocaust Remembrance Day, and as every year since 2013, an operation launched on social networks around #OpIsrael incites to attack the interests of the Hebrew State in the cyberspace.

Cyber Threat Landscape 2022

Our [2022 Cyber Threat Overview](#) takes a look at the threat trends observed over the past year in terms of cybercrime and state threats, with a focus on the Russian, Iranian, Chinese and North Korean threats.
